

Helping You Move Faster

You recognize the need to evolve. You understand the investment required. You've identified the technology to take your business model into the future. Now, how will you deploy it?

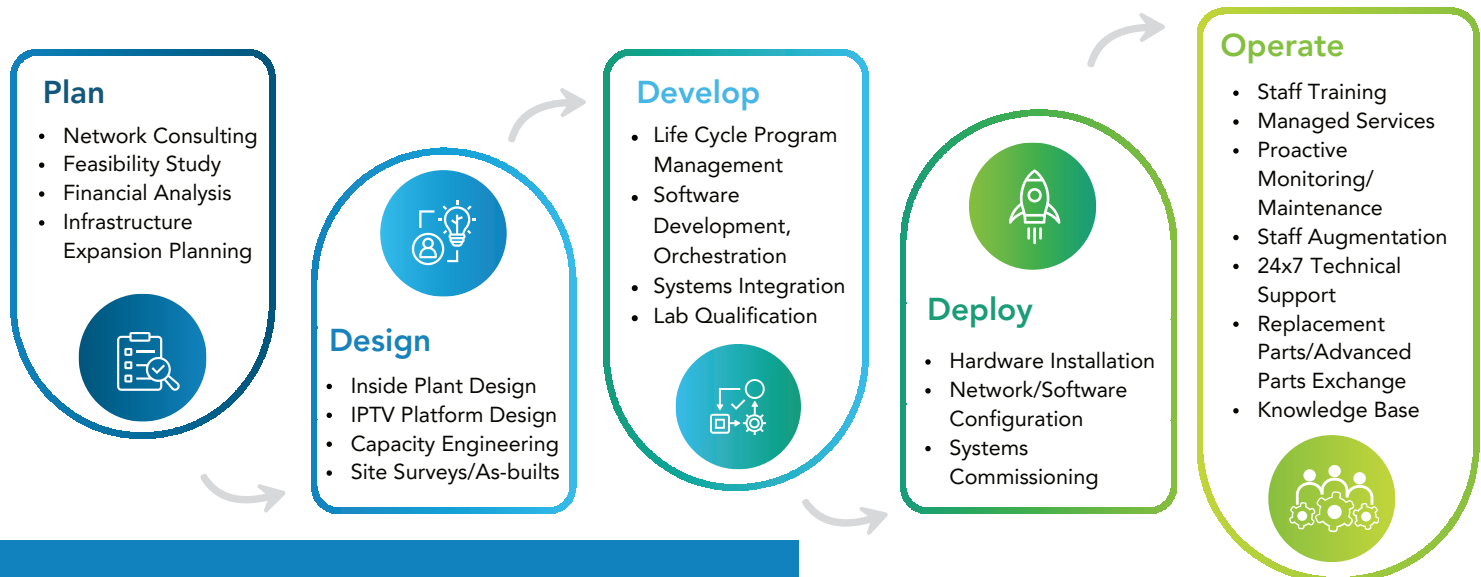

Vecima helps operators evolve their networks with cloud-based solutions that deliver ground-breaking speed, superior video quality, and exciting new services to their subscribers. We led the industry to Distributed Access Architecture (DAA) and video-on-demand, introduced large-scale commercial and hospitality video, and led many of the entertainment and connectivity innovations we use in our homes and businesses every day. Now, let our expert Professional Services Team help you evolve your network.

We partner with your management and technical teams to deploy solutions that meet your needs, simplifying oversight, management, and timelines for complex multi-party environments.

Vecima's Professional Services team is comprised of telecom industry veterans with expertise in:

- Broadband Networks
- Distributed Access Architecture
- FTTx
- IP/QAM video
- Network expansion
- Network planning
- Design and Engineering
- Installation and Operation
- Large-scale implementation
- Program Management
